Lab Notes & Life Lessons: Women in Chemistry Careers

Short talks and Q&A session

with

**Dr. Ganna Lyashenko and Dr. Charlotte Gers-Panther
(Wiley)**

There are countless exciting career opportunities for women in chemistry. However, navigating the path to a fulfilling and balanced professional life can sometimes present unique challenges for women compared to men.

In this workshop, we have the rare opportunity to engage in an open conversation with two successful women who have established inspiring careers in scientific publishing.

Each speaker will give a short talk (10–15 minutes), sharing insights into their journey and the factors that helped—or hindered—their career development. These talks will be followed by an interactive discussion, offering participants the chance to ask questions, exchange experiences, and gain practical advice on building a meaningful career in chemistry.

This session is open to all women in chemistry interested in personal perspectives and guidance on careers in the chemical sciences.

As the format is highly interactive, participation is limited to 25 attendees. Please sign up using the link below to take part (deadline: 15th May).
