

Tweeting, Browsing, and Perusing ...

... human information behavior is the core of our research and teaching. Join us on a voyage of discovery!

Automatic Speech Recognition and Voice Interaction with Virtual Agents

They hear you and speak to you:
Discover what speech interaction with software can mean, and develop your own algorithms for virtual agents and chatbots.

Applied Computer and Data Science

Whether it's project-oriented coding or understanding and designing algorithms – with us you're equipped for the complex world of IT!

Smart Objects via Computational Intelligence

Computers have long since ceased to be mere typewriters or calculators. They're smart everyday companions. Find out how virtual agents can acquire knowledge and how they help people solve problems.

Big Data, Big Brother, Big Problems – Information Ethics

Learn about the problems the digitized world is struggling with and design solutions!

Way Beyond Googling – Information Retrieval

Are you finding, or just searching? Our everyday lives involve a wide variety of information needs - from „Where is the nearest restaurant?“ to „Why do men not have handbags?“. We'll take you behind the scenes of computer-based information seeking.
